SUMMARY

Full-stack engineer with commercial **Next.js**, **React**, and **TypeScript** experience on production web and commerce platforms. Strong at adopting an existing codebase, extending it for new requirements, and integrating **payment gateways**, APIs, and third-party services—not rebuilding what already works. Comfortable in Agile, distributed teams shipping maintainable, well-tested features.

EXPERIENCE

Newcleux

Senior Software Engineer

Mar. 2026 – Present

Abu Dhabi, UAE (Remote)

- Extending an **existing production platform** with React, TypeScript, and Node.js—adapting current components and services rather than rebuilding features from scratch
- Integrating **frontend UI with backend APIs** and external third-party services to deliver real-time, context-aware user journeys in an established architecture
- Debugging and shipping production APIs and web flows with a distributed team of product, UI, and backend engineers; keeping changes reusable for later releases

GrowthRune

Backend Team Lead

Jan. 2025 – Mar. 2026

South Bay, FL (Remote)

- Led a **12-engineer Agile/Scrum team** on an established product: sprint planning, code reviews, mentoring, and reliable production deployments across a distributed remote team
- Built and supported **third-party integrations** (Ready Player Me SDK, Twilio, AWS webhooks) and GraphQL/REST APIs consumed by the live web product
- Designed multi-instance **AWS architecture** (EC2, ECS, Lambda) with Redis for caching, sessions, and cross-instance sync so the live platform could scale without a rewrite
- Implemented Redis caching (cache-aside, write-through, TTL) that **reduced database queries** and lowered API latency; debugged production integration issues and kept services maintainable under high traffic

Codistan Ventures

Software Engineer

June 2024 – June 2025

Islamabad, Pakistan

- **Report Website**: Integrated SendGrid Inbound Parse and Firebase Functions to ingest external email/PDF data, persist it in MySQL, and run Redis background jobs
- **Campsite App**: Delivered a production **Next.js** platform and admin dashboard; connected React flows to Node.js, MongoDB, and AWS services, including full chat, without discarding existing product patterns
- **Parabolic Crypto**: Built a real-time **Next.js** trading web app integrating Twitter, Reddit, and Binance APIs; handled API contract changes, error states, and production debugging
- Implemented **subscription billing** and payment-related flows in Next.js; translated client requirements into targeted enhancements inside the existing codebase

DevStarX

Software Engineer

Oct. 2023 – May 2024

Islamabad, Pakistan

- Built production **Next.js / React / TypeScript** features for StratFinder on Prisma and **Medusa** (commerce platform)—storefront and admin UI wired to backend commerce APIs
- Integrated frontend commerce functionality with REST/API services, Medusa, and Google Analytics; reused platform components and added client-specific enhancements only where needed
- Worked inside an **established product architecture** with clients and internal engineers; focused on maintainable TypeScript, debugging, and shipping rather than greenfield rewrites

K2X Technologies

Software Engineer

Sept. 2022 – Sept. 2023

Peshawar, Pakistan

- **ECOWAS:** Built API-driven Sankey visualizations from Excel data covering energy flow across **16 countries**; acted as product owner and adapted data/UI for multi-market use
- **GeniHunt:** Integrated **Stripe** payment processing and event streaming for analytics; improved B2B search by **50%** with Redis caching, indexing, and load balancing
- **NTU & PMP Ukraine:** Owned database and user administration on a project-management platform, and contributed backend APIs on a funds-management system
- Troubleshoot integration and application issues across client codebases; extended existing services instead of replacing them

Quantum Learning Academy

Software Engineer Intern

July 2022 – Oct. 2022

Peshawar, Pakistan

- Built full-stack features with Express and Node.js: HTTP APIs, file I/O, and database interactions

EDUCATION

University of Engineering and Technology Peshawar

Bachelors of Computer System Engineering

2023

Peshawar, Pakistan

- **Coursework:** Data Structures & Algorithms, Database Management, Web Engineering

SKILLS

Frontend : Next.js, React, TypeScript, JavaScript, Redux, Material UI, CSS

Backend : Node.js, NestJS, Express, Fastify, GraphQL (Apollo Server), REST APIs, Webhooks

Integrations : Stripe, Twilio, SendGrid, third-party REST/GraphQL APIs, Firebase Functions

Databases : PostgreSQL, MySQL, MongoDB, Prisma, Mongoose, Redis

Cloud & DevOps : AWS (EC2, ECS, Lambda), Docker, Nginx

Practices : Agile/Scrum, Jest, Mocha, Git, Postman, Figma

CERTIFICATIONS

Express.js (TestDome) · Programming Foundations with JavaScript · Web Development Bootcamp
